Revolutionizing Mental Health: At-Home Ketamine-Assisted Therapy

Georgia's Ketamine Experts

Ketamine assisted therapy or KAT, a novel approach that marries the potency of ketamine therapy, with traditional talk therapy, has risen in popularity for mental health conditions like depression and anxiety.

Traditionally, the administration of ketamine required the expertise of trained medical professionals through intravenous or intramuscular routes.

However, the associated costs and limited accessibility of these methods spurred a revolutionary concept: **at-home therapies**.

The power of compounded ketamine, in forms that can be easily administered at home, paired with talk therapy may be the right fit for many patients.

Most Common Ketamine Dosage Forms Used for Depression, Anxiety, OCD, PTSD, Pain, and Ketamine Assisted Psychotherapy

- Ketamine sublingual solution/suspension
- Ketamine capsules
- Ketamine suppositories
- Ketamine nasal spray
- Ketamine troche
- Ketamine rapid dissolve tablet

Morgan Compounding Pharmacy works with top mental health care providers in Georgia by providing custom compounded ketamine for patients in KAT programs.

Through dedication and innovation, we rewrite the narrative of addressing mental health conditions, offering a brighter and more accessible future — one personalized prescription at a time.
